

Uncomplicated cystitis*

- Do dipstick test to confirm diagnosis
- Empirical treatment (by preferential order):
 - Fosfomycine 3g Single Dose fasting, ideally at bedtime
 - Pivmecillinam 2 x 200 mg bid, for 5 days

These agents are effective against most resistant ESBL-producing or highly resistant Enterobacteriaceae

**Cystitis with no risk factor, i.e. female < 75 years, with normal urinary tract, no immune depression and creatinine clearance > 30*
