

Acute uncomplicated ESBL-E related pyelonephritis: ambulatory care*

- Diagnosis usually established when receiving urine culture results after initiating empirical antibiotic treatment
- **Antibiotic treatment** (preferential order according to antibiotic susceptibility)
 - Ciprofloxacin 500mg bid, 7 days (if bacterial agent susceptible to nalidixic acid)
 - Co-trimoxazole 800 mg bid, 10 days
 - Amoxicillin clavulanate 1gr tid, 10 days
 - Gentamicin 5-8mg/kg IM/day, 5 days or amikacin 25mg/kg IM/day, 5 days
- Patient information
- Infection control measures (specific leaflet in website)

**Uncomplicated pyelonephritis (female, non-pregnant, no organic or functional urinary tract abnormality, no immune depression nor renal insufficiency with clearance < 30)
no sign of severity, no indication for urinary drainage, nor criteria requiring hospitalisation
Doses are given for normal body weight and creatinine clearance (see table on medical kit tab)*
